

16.5 cm Component Speaker with Mesh grille Package

The Z is based on highly advanced technology developed by Pioneer, employing carefully selected materials and parts, benefiting from decades of automotive loudspeaker design theory and testing ability. Following Pioneer's OPEN & SMOOTH™ sound concept, the Z series of automotive loudspeakers features smooth off-axial frequency response, superior directivity and extended frequency range engineered specifically to produce dynamic, accurate sound quality for the car. The result is a purity of sound that achieves unprecedented audio artistry.

Designed for Hi-Res Audio

The quality of music recordings available to listeners has evolved. Hi-Res Audio recordings contain significantly more data compared to a standard CD recording and require a loudspeaker that is capable of smoothly reproducing frequencies of 40kHz or higher. The Z speakers are designed to deliver sound that is clearer, sharper and more complex - reproducing music that is closer to the original performance.

29mm Aluminum Alloy Balanced Dome Tweeter
